

## **iPod battery replacement**

Battery Product Code:  
**DLP345388-01**

1. Ensure that your old iPod battery is fully discharged before attempting to open and replace the battery.
2. Using a small screwdriver, begin to pry open the case, starting with the top corner.
3. With the screwdriver wedged inside the case, carefully work your way down to the bottom of the iPod, unclipping the case clips as you go.
4. With one side of the case fully unclipped, you can now lift the main section of the iPod away from the case cover.
5. Carefully remove the old battery from the back of the iPod. The battery should now only be connected by its power cord. Please pay attention to the original orientation (power cord on same side as connector).
6. With the battery removed you can see the power connector and the rubber pad that supports the battery (do not remove this pad). Gently pull on the power cable to disconnect it from the iPod. You can now plug in the new battery: Place the new battery on the original rubber pads, and snap the case back on.
7. Your new battery will need a minimum of three hours of charging before first use.

### **Disclaimer**

**The information presented in this set of instructions has been reviewed and validated for accuracy. It is accurate for the first generation of iPods (not the newer slim model) at the time of printing.**

**Succeeding upgrades, instructions and specifications are subject to change without notice. The user is aware that installing this upgrade kit will affect the warranty of the unit.**

**Please note that scratches or marks may be made in the iPod when it is opened. Danionics A/S assumes no liability for damages incurred directly or indirectly from replacing the battery.**

**Danionics A/S assumes no liability for damages incurred directly or indirectly from errors, omissions or discrepancies between any succeeding product and this set of instructions.**
